Please find below and/or attached an Office communication concerning this application or proceeding.

	Application No.	[ A				
	Application No.	Applicant(s)				
Office Action Summans	09/256,075	YONG SONG				
Office Action Summary	Examiner	Art Unit				
The AGAIL INC. DATE of this accomplisation of	Naghmeh Mehrpour	2686				
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).  Status						
1) Responsive to communication(s) filed on <u>24 F</u>	<u>-ebruary 2003</u> .					
2a) This action is <b>FINAL</b> . 2b) ☐ Th	is action is non-final.					
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is						
closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213. <b>Disposition of Claims</b>						
4)⊠ Claim(s) <u>1,2,9 and 10</u> is/are pending in the application.						
4a) Of the above claim(s) is/are withdrawn from consideration.						
5) Claim(s) is/are allowed.						
6)⊠ Claim(s) <u>1,2,9 and 10</u> is/are rejected.						
7) Claim(s) is/are objected to.						
8) Claim(s) are subject to restriction and/or election requirement.						
Application Papers						
9) The specification is objected to by the Examiner.						
10) The drawing(s) filed on is/are: a) accept	•					
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  11) The proposed drawing correction filed on is: a) approved b) disapproved by the Examiner.						
If approved, corrected drawings are required in reply to this Office action.						
12) The oath or declaration is objected to by the Examiner.						
Priority under 35 U.S.C. §§ 119 and 120						
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).						
a) ☐ All b) ☐ Some * c) ☐ None of:						
1. ☐ Certified copies of the priority documents have been received.						
2. Certified copies of the priority documents have been received in Application No						
<ul> <li>3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).</li> <li>* See the attached detailed Office action for a list of the certified copies not received.</li> </ul>						
14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).						
a) ☐ The translation of the foreign language provisional application has been received. 15)☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.						
Attachment(s)						
1) Notice of References Cited (PTO-892) 2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 3) Information Disclosure Statement(s) (PTO-1449) Paper No(s)	5) Notice of Informal F	r (PTO-413) Paper No(s) Patent Application (PTO-152)				

Art Unit: 2686

#### **DETAILED ACTION**

# **Drawings**

1. The drawings are objected to under 37 CFR 1.84(h)(5). Figure 3 on sheet 3, does not follow the specification description and claims limitation, Examiner suggests that above the connecting line between box 34 and 35, and the connecting line between box 37 and 38 "YES" changes to "NO". Also above the block 36 and above the block 39 "NO" changes to "YES".

A proposed drawing correction is required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 9, are rejected under 35 U.S.C. 103(a) as being unpatentable over. Patsiokas et al. (US Patent Number 5,203,012) in view of Shin et al. (US Patent Number 5,687,171).

Regarding claim 1, Patsiokas teaches a channel assignment method for multi-FA (frequency Assignment) cellular systems in which a base station communicates with a

Art Unit: 2686

plurality of mobile stations (see figure 2, col 2 lines 65-67, col 3 lines 1-38), **the method** comprising the steps of:

comparing a first threshold value with received power when the base station receives a new call **request** (see figure 2, 208, col 3 lines 54-57);

if the received power is less than the first threshold value (see figure 2, 208, col 3 lines 56-59);

assigning a **first** traffic channel in a first FA of the request (see figure 2, 210 allocate corresponding radio channel, col 3 lines 56-59);

## otherwise;

comparing a **second** threshold value (212) with received power of the second FA (see figure 2, 214, col 4 lines 2-11); and

if the strength or received power is less than the second threshold assigning a **second** traffic channel in the second FA (see figure 2, 216, col 4 lines 10-12); and

### otherwise;

rejecting the request (see figure 2, 218, reject corresponding radio channel, col 3 lines 10-16). Patsiokas fails to teach a channel assignment method for a CDMA cellular system. However Shin teaches method of allocation channels for CDMA cellular system (col 2 lines 15-20). Therefore, it would have been obvious to ordinary skill in the art at the time the invention was made to combine the above teaching of Shin with Patsiokas, in order to provide the optimum channel available at any given point in time from an interference standpoint.

Art Unit: 2686

Regarding claim 9, Patsiokas teaches a method of channel assignment method for use in a multi-FA cellular system in which a base station communications a plurality of mobile stations, the method comprising the step of:

- a. receiving at the base station, a new call request from a mobile station in a first FA (see figure 2, 202, col 2 lines 65-68);
- b. determining a level of power received at the base station in the first FA as first FA received power (see figure 2, 204, col 3 lines 30-39);
- c. comparing a first threshold value with the first FA received power (see figure 2, 208, col 3 lines 54-57);
- d. if the first FA received power is less than the first threshold value (208, col 3 lines 56-59);

assigning a first traffic channel in the first FA to the mobile station in response to the new call request (see figure 2, 210, col 3 lines 56-59); if the first FA received power is not less than the first threshold value (212, col 4 lines 1-3);

determining levels of power received at the base station in FAs other than the first FA (214, col 4 lines 4-10); among the other FAs, determining the FA having the lowest level of power level as the base station as a second threshold FA, and the lowest level as second FA received power (see figure 2, 214 col 4 lines 6-11); comparing a second threshold value with the second FA received

comparing a second threshold value with the second FA received power (see figure 2, 214, col 4 lines 6-11);

Art Unit: 2686

if the second FA received power is less than the second threshold value, assigning a second traffic channel in the second FA to the mobile station in response to the new call request (See figure 2, 216, col 4 lines 10-12); otherwise, rejecting the new request (see figure 2, 218, col 4 lines 12-16). Patsiokas fails to teach a channel assignment method for a CDMA cellular system. However Shin teaches method of allocation channels for CDMA cellular system (col 2 lines 15-20). Therefore, it would have been obvious to ordinary skill in the art at the time the invention was made to combine the above teaching of Shin with Patsiokas, in order to provide the optimum channel available at any given point in time from an interference standpoint.

4. Claims 2, 10, are rejected under 35 U.S.C. 103(a) as being unpatentable over Patsiokas et al.(US Patent Number 5,687,171) in view of Shin (US Patent 5, 687,171) in further view of well known prior art (MPEP 2144.03).

Regarding claim 2, Patsiokas teaches a method comprising the step of assigning a traffic channel in the first FA of the request, if there is an available channel when there is a new call request (see figure 2, col 2 lines 40-50). The combination of Patsiokas and Shin does not mention that assigning a traffic channel in the first FA of the request, if there is an available channel when a base station receives a handoff call request. However the examiner takes official notice of the fact that assigning a traffic channel, if there is an available channel when a base station receives a handoff call is well known in the art. Therefore, it would have been obvious to ordinary skill in the art at the time the invention was made to combine the above teaching with Patsiokas modified by Shin, in order to

Art Unit: 2686

control the allocated received power by preventing wasting additional power, when the mobile moves to different areas.

# Response to Arguments

5. Applicant's arguments with respect to claims 1-2, 9-10, have been considered but are most in view of the new ground(s) of rejection.

## Conclusion

6. Any responses to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

or faxed to:

(703) 872-9314, (for formal communications indented for entry)

Or:

(703) 308-6306, (for informal or draft communications, please label "PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II. 2121 Crystal Drive, Arlington. Va., sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.

Any inquiry concerning this communication or earlier communication from the examiner should be directed to Melody Mehrpour whose telephone number is (703) 308-7159. The examiner can normally be reached on Monday through Thursday (first week of

Art Unit: 2686

bi-week) and Monday through Friday (second week of bi-week) from 6:30 a.m. to 5:00 p.m.

If attempt to reach the examiner are unsuccessful the examiner's supervisor, Marsha Banks-Harold be reached (703)305-4379.
